DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-15, and 20** drawn to a lithographic exposure apparatus and a device manufacturing method and device manufactured classified in class 356, subclass 399.
 - II. **Claims 16-19**, drawn to a method of calibrating a lithographic projection apparatus, classified in class 355, subclass 77.
2. **Inventions I (claims 1-13) and II** are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case Invention II can be practiced with a lithographic projection apparatus without a measuring system for at least two degrees of freedom and Invention I can be used in an exposure process.
3. **Inventions I (claims 14, 15, and 20) and II** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the device manufacturing method does not need measuring position of the support structure when each of the reference marks is projected

onto said image sensor and thereby does not need the particular providing, holding, and positioning steps of the calibration method. The subcombination has separate utility such as in the inspection of a lithographic exposure apparatus.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
